
Cisco Catalyst IE3400 Rugged Series switches

# Make your industrial network smarter, stronger, and more secure

Get more efficiency, resilience, and productivity from your industrial network. Catalyst IE3400 Rugged Series DIN rail switches are ruggedized, high-performing, modular, and secure to help you get there.

See the Catalyst IE3400 Rugged Series difference

Simplify and make your operations ready for the future with a rock-solid networking and security foundation that's built on easy-to-deploy, high-performing, and secure Catalyst IE3400 Rugged Series industrial switches.

## Deliver continuous operations

Keep your network performing at its peak, with all-gigabit fiber ports, Power over Ethernet (PoE)-enabled copper ports, advanced resiliency and industrial protocols, and industry certifications.

## Optimize operations with IT best practices

Simplify operations with enterprise-grade networking features of the Cisco IOS XE operating system and network management with Cisco Catalyst Center.

## Unify security with networking

Eliminate point products and simplify the network architecture by embedding visibility and security as software features. Get details on connected assets with Cisco Cyber Vision. Limit the spread of malware with segmentation based on the Cisco TrustSec solution.

## Simplify and secure remote access

Set up zero-trust network access (ZTNA) with the hosted Cisco Secure Equipment Access gateway, so that your operations team, contractors, and vendors can troubleshoot and maintain OT assets, while you retain full control.

# Catalyst IE3400 models

Select the model that's best-suited for your needs. Add expansion modules as your requirements evolve.

## Core models

### IE-3400-8T2S

Modular design, gigabit copper ports, and fiber uplinks, for industrial DIN rail deployments

- 8 GE copper and 2 GE fiber ports, expandable up to 26 ports
- Advanced industrial security and resiliency protocols
- Cisco IOx application hosting environment
- Cisco SD-Access Policy Extended Node
- Microsegmentation based on Cisco TrustSec technology
- Managed by Cisco Catalyst Center

### IE-3400-8P2S

Modular design, gigabit copper ports with PoE, and fiber uplinks for industrial DIN rail deployments

- 8 GE PoE/PoE+ copper and 2 GE fiber ports, expandable up to 26 ports
- Up to 240W in base and 480W power budget with expansion modules
- Advanced industrial security and resiliency protocols
- Cisco IOx application hosting environment
- Cisco SD-Access Policy Extended Node
- Microsegmentation based on Cisco TrustSec technology
- Managed by Cisco Catalyst Center
